

# Aquaness Chemicals

Chemicals for well stimulation,  
intermediates, and custom manufacturing

Servicing the industry for over 70 years, **Aquaness™ chemicals** provide products as a wholesale offering, with a majority of the products focused on oil and gas production. These include chemicals for drilling and well stimulation, intermediates for finished goods, as well as custom manufactured products.

## Well stimulation chemicals

Aquaness offers a portfolio of well stimulation chemical products to help enhance oil recovery and improve drilling and stimulation efficiency. These products are primarily used by pumping service companies during acidizing and fracturing operations. Product offerings include emulsifiers, biocides, stimulation treatment additives, corrosion inhibitors, and surfactants. When requested, chemical

experts can provide specific product recommendations and perform testing and analysis to ensure system compatibility before use.

## Intermediates for production chemicals

Intermediates are available for blending and re-formulating to help distributors, suppliers, and service companies develop various finished products. These finished goods are then sold to the end user to help improve production rates, enhance flow assurance, and protect against bacteria and corrosion. Products include demulsifiers, corrosion inhibitors, paraffin inhibitors, sludge prevention products, and pour point depressants.

## Applications

- Oil and gas production
- Acidizing and fracturing operations
- Blending and re-formulation of chemicals
- Custom products

## Benefits

- Enhance oil recovery, protect against bacteria and corrosion, and maintain well integrity with well stimulation chemicals
- Improve finished product quality and performance with reliable intermediates
- Rely on custom manufacturing to meet required specifications for unique applications

## Custom manufacturing

Aquaness provides a variety of products tailored for specific end uses, such as intermediates for the mining industry, additives used in acrylics, and cleaners and corrosion inhibitors for nuclear power plant operations. Aquaness can also manufacture products to meet required specifications for unique applications.
